

The new Volkswagen based Richard Holdsworth Vision really is a most astonishing motor caravan.

In a vehicle just 15ft long and 6ft 1 in wide - and some 18 inches lower than almost any coachbuilt - the Vision has a rear-end kitchen that would grace many a home, a separate toilet compartment of really usable proportions, a spacious 'L' shaped dinette and a choice of single or double beds.

For sheer interior space and outstanding features in relationship to exterior size, the Vision takes some beating.

Obviously, Richard Holdsworth designers cannot make the Volkswagen interior any larger than it is - but two clever ploys have maximised the capacity of this the most popular motor caravan base vehicle of all time.

First of all, by selecting Volkswagen's own high top with the roof strengthening bows re-positioned around the roof top, Richard Holdsworth has provided standing room where no standing room existed before.

Secondly, Richard Holdsworth designers have used a simple room divider to create the two-room system normally seen in much bigger high tops or coachbuilt motor caravans.

This clever fold-away room divider partitions off part of the vehicle when a toilet compartment is required and folds away when not.

And it means a toilet compartment of a size that really can be used - some 44 inches long and 22 inches wide - measured even by American motorhome standards and it's big.

Rear End Kitchen

With all the extra space that Volkswagen's own high top generates our designers really excelled when it came to creating your kitchen. The heart of the unit is the latest enamel cooker, sink and drainer unit that simply needs a wipe clean to come up looking like new time and time again.

We've fitted the large Electrolux caravan refrigerator powered by 220 volt electrical supply when on site, by vehicle electrics when on the move and by bottled gas when camping 'in the wild'.

(While on the subject of electrics, the Vision is equipped with a sophisticated control system incorporating a second battery, split charger and mains input. There is a battery condition meter and low warning light for the under-floor fresh water tank.)

Dining/Sleeping

The Vision has a choice between comfortable double or single main beds - and if you want a fourth berth, a 6ft double is available as an optional extra within the high top.

But the Vision's real versatility comes from the marvellous way in which the sleeping/dining/seating arrangements work.

Take a typical day, for example. At the start you will probably leave the rear seat

in the spacious and comfortable 'L' shaped configuration. When you're on the move, a few simple movements gives you four comfortable face-forwards seats.

In the evening you may wish to entertain friends - recline one cab seat and swivel the other to match up with the 'L' shaped dinette - the space is enormous. Just look at the pictures.

At night, of course, the single or double beds come into play and in the morning, you're back in the 'L' shaped dinette for breakfast.

The Vision has one further trick up its sleeve - the part of the 'L' shaped dinette nearest the door lifts out altogether to provide a generous amount of free floor area for carrying goods.
